NOTICE: To all Commercial Businesses in Beverly

State Required Cross Connection Control Survey Information

The City of Beverly has contracted with Weston & Sampson Engineers, Inc. (WSE) to perform Cross Connection Control surveys at all businesses. WSE has a number of Mass Department of Environmental Protection certified surveyors.

The Cross Connection Survey is a requirement per Mass Code or Regulations Section 310-22.22 (the Drinking Water Regulations). Surveys generally take fifteen minutes to a half an hour. **There is no cost to you for the survey.**

The WSE MassDEP Certified Survey will be coming to your business during normal business hours to take a quick look at plumbing systems and how you use Town water. If you would like to schedule an appointment in advance please call the WSE Backflow message center at 978-595-1533.

Cross Connection Control is a program intended to protect water to the last free flowing tap. It is in concert with, but separate from, the State Plumbing Code. Proper cross connection control will protect not only the Town's water supply system, but the potable water supply in your building. It is vital to the safety of all who use water from our water supply system that all businesses be surveyed.

If the WSE surveyor finds a cross connection that is not protected from backflow or back siphoning we will contact you with details of what you must do to protect the water supply system.
